

PAMHS

Powder and Material Handling Services

SERVICE & MAINTENANCE

- Rotary and diverter valves function as intersections in pneumatic conveying systems. Their continuous operation is therefore paramount.
- Proactive preventative maintenance will extend the life of your rotary and diverter valves, along with optimising your complete system - reducing the risk of production downtime and continuing to deliver an accurate throughput.
- Powder and Material Handling Services (PAMS) provide onsite or factory-based servicing and repairs. Working closely with clients to be part of their preventative maintenance schedule while also responding quickly to reactive breakdowns.
- Additionally, PAMS service all component parts in pneumatic conveying systems.

SERVICES

- Bespoke maintenance packages on all manufacturer's equipment.
- 24/7 maintenance support.
- Maintenance training.
- Detailed service reports to deliver system optimisation and remedial planning work.
- Maintenance check list and schedules.
- Expert advice on legislation and upgrade requirements to meet ATEX/DSEAR, COSHH, Health & Safety.
- Site surveys with plant drawings and detailed spare part schedules available.
